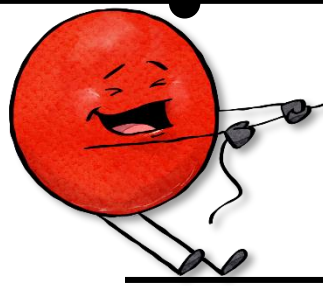
Math in Demand



Teacher Notes

- This worksheet works best to reinforce markups.
- Make sure that students bubble in their answers for the front page (#1-7) and the back page (#8-14). The bubbles allow students to check their answers and results in a more confident student. In addition, it makes it a lot easier for you to do a quick "checking for understanding" when you have the answer key and can compare the bubbles shaded in.
- Make sure that students show their work! Space is given so that students can demonstrate their knowledge of the concept. I do not give students credit if they do not show their work. Also, students need to give a nice reflection (2-3 sentences)!
- You can decide if you want to use the score in the top left.
- If you have any questions or concerns, please email me at mathindemand@hotmail.com.

ANSWER KEY

Directions: Solve the following problems on markups. Make sure to bubble in your answers below on each page so that you can check your work. Show all of your work!

1 A mug that costs $10 is marked up 50%. What is the selling price?

Markup = $10 x 0.5
Markup = $5
Selling Price = $10 + $5
Selling Price = $15

2 A shirt that costs $5 is marked up 20%. What is the markup?

Markup = $5 x 0.2
Markup = $1

3 Original Price: $100
Markup: 75%
Selling Price: ?

Markup = $100 x 0.75
Markup = $75
Selling Price = $100 + $75
Selling Price = $175

4 Original Price: $50
Markup: 30%
Selling Price: ?

Markup = $50 x 0.3
Markup = $15
Selling Price = $50 + $15
Selling Price = $65

5 A coffee mug needs to be marked up by 60%. What is the new price of the mug if it was originally $25?

Markup = $25 x 0.6
Markup = $15
Selling Price = $25 + $15
Selling Price = $40

6 Original Price: $8
Markup: 25%
Markup: ?

Markup = $8 x 0.25
Markup = $2

7 A chair that costs $20 needs to be marked up by 35%. How much is the chair being marked up?

Markup = $20 x 0.35
Markup = $7

8 A spoon that costs $1.25 needs to be marked up by 4%. What is the new price of the spoon?

Markup = $1.25 x 0.04
Markup = $0.05
Selling Price = $1.25 + $0.05
Selling Price = $1.30

9 Sunglasses that cost $4 are marked up by 7.5%. What is the markup?

Markup = $4 x 0.075
Markup = $0.30

10 Original Price: $55
Markup: 55%
Selling Price: ?

Markup = $55 x 0.55
Markup = $30.25
Selling Price = $55 + $30.25
Selling Price = $85.25

11 A candy bar that costs $0.50 is marked up 30%. How much does a candy bar cost?

Markup = $0.50 x 0.3
Markup = $0.15
Selling Price = $0.50 +$0.15
Selling Price = $0.65

12 Original Price: $30.75
Markup: 20%
Markup: ?

Markup = $30.75 x 0.2
Markup = $6.15

13 A shoe company wants to mark up all shoes by 40%. What would be the markup on shoes that cost $25.75?

Markup = $25.75 x 0.4
Markup = $10.30

14 A backpack that costs $15.50 needs to be marked up by 110%. What is the selling price of the backpack?

Markup = $15.50 x 1.1
Markup = $17.05
Selling Price = $15.50 + $17.05
Selling Price = $32.55
